### **Stealth Imaging Introduces First PCIe based H.264 Real-time Encoding Card with Multiple Channels.**

**Card Will Handle Up to Four Simultaneous Real-time SD Streams;  
Cost Up to 75% Less than Other Solutions**

**Washington, DC Wednesday, December 6, 2006** – Stealth Imaging, Inc., an innovator of high-quality, cost-effective digital media hardware and software, made the public introduction of their Venturi Quattro™ SD encoding card. The Venturi Quattro™ is capable of 4 simultaneous H.264 encodings with each channel supporting real-time, full D1 resolutions. The Venturi Quattro™ offers the best price/performance ratio on the market. Costing as much as 75% less than other competing products the Quattro will revolutionize digital video encoding, not for the broadcast market, but for anyone seeking real-time video encoding.

“The response so far to our product line has been tremendous”, said Mark Wells President of Stealth Imaging, “we did not expect the sheer amount of pent up demand there is for encoding H.264 video. Our products are designed to cater to these customers, the broadband and independent content providers as well as education and public safety. We bring the price down to where almost anyone can afford the same quality products as the mainline broadcasters.”

Stealth Imaging expects a commercial release of their Venturi Quattro™ SD in the first quarter of 2007. Additional products based on the Stealth encoding design will be available in the 2<sup>nd</sup> and 3<sup>rd</sup> quarter of 2007. Stealth Imaging

8647 Richmond Hwy. Suite 656  
Alexandria, VA. 22309
